Epigenetics at once disperses control of epigenetic outcomes across time and space - and yet, by emphasizing plasticity, it suggests that epigenetic processes can, even should, be directed. This has a more future-oriented temporality about the possibility of securing, even improving, life through ongoing intervention to eliminate defects and purify life.

Acetylation requires a pool of the metabolite acetyl-CoA in the nucleus. 155 A very new study showed that acetyl coenzyme A synthetase in the hippocampus of mice is necessary for epigenetic regulation of transcription of genes involved in neuroplasticity dynamics and memory formation. 156 This is the first evidence for metabolic signaling to chromatin in the brain and indicates a critical ...
